

ABOUT MAPLE SYSTEMS

Elevating the Art of the Human-Machine Interface

Maple Systems is unique in the industrial automation marketplace. For more than 20 years, we have been operator interface experts and industry leaders in the design, manufacture and support of high-quality, full-featured and affordable operator interface solutions. Our singular focus on the operator interface terminal combined with 20+ years of experience, as well as a product line that runs the gamut from simple alphanumeric operator interface terminals to sophisticated graphics touchscreen products uniquely qualifies Maple Systems as the operator interface experts who can help you find exactly the right solution for all of your operator interface needs.

With operator interface terminals that communicate with over 80 families of controllers from more than 40 industry-leading manufacturers like Allen-Bradley, Omron, Siemens, Koyo and GE Fanuc, as well as the hundreds of PLCs, motion controllers, loop controllers and DCS that use Modbus and ASCII communications, our controller support is unsurpassed. And each of our products have all of the features you need at extremely affordable prices.

Whether you need simple I/O or complex data entry and process monitoring, our international team of operator interface experts can help you find the perfect solution for your application.

Value...Performance...Personalized Solutions...
